

SUPERPRO

For the chimney professional who demands the best

A SELKIRK COMPANY

SUPERVENT PRODUCTS INC. 375 GREEN ROAD, STONEY CREEK, ON L8E 4A5 TEL: 1-800-263-9308 FAX: 1-905-662-5352

Introducing a better quality chimney to top off all stove installations. SUPERPRO offers the latest technology in factory-built chimney design - providing superior performance, durability and safety. Years of development and design have combined the highest quality stainless steel, superior low chloride insulation, built-in safety features, and flexible installation options making SUPERPRO the best choice, every time.

SUPERPRO Chimney, Elbows and Tees, use 304 stainless steel throughout. This grade being an austenitic stainless steel adds substantial quantities of nickel (Ni) to high chromium alloys which provides superior resistance to corrosion at temperature ranges that exceed test standards. The brushed finish of 304 stainless provides a very rich and distinguished look which complements this superior product. SUPERPRO is the most corrosion resistant chimney in the industry today and will stand the tests of time for years to come.

Advanced engineering and testing have also made SUPERPRO a safer and cleaner burning chimney. While the outer casing temperature maintains a 2" clearance to combustibles, the inner liner can withstand temperatures of 2100° F and will stay hot to prevent creosote build up. The smooth inner liner produces rapid stabilization of strong draft ensuring efficient operation of the latest, high tech stoves. In addition, embossed couplers prevent moisture penetration to the inside, virtually eliminating any chance of corrosion.

All additional component parts of the SUPERPRO line of chimney products are made from galvalume - a state of the art combination of aluminum, zinc and silicon, providing twice the corrosion resistance of galvanized steel.

SUPERPRO is easy to install. Its compact, twist-lock design makes assembly safe and quick, without requiring special tools. The slim design allows flexible location options while minimizing use of valuable floor space.

With a 25 year limited warranty to back up all of these benefits, the complete SUPERPRO chimney system is the smart choice, every time.

Stainless Steel Chimney

Chimney Sections

- High temperature -ANSI/UL 103.HT listed and tested to withstand temperatures of 2100°F.
- Slim, advanced design.
- Secure twist-lock design couples chimney sections together with just a 1/8 turn.
- Sectional overlap of 1-1/8".
- Chimneys are sized according to the inner diameter and are available in 6" and 8" diameters.
- Insulated chimney requires 2" clearance to combustible material.
- Superpro 2100 has a 1" wall thickness.

24" and 36" lengths are also available in a High Density Carton.

Stainless Steel Locking Bands

- Two flanges engage the grooves in each end of the adjoining sections holding them securely together.
- Must be used on all sections of chimney that make up an offset. This includes two locking bands per elbow plus one locking band for every chimney length between the elbows. Must also be used on tee branch to attach chimney length.
- While locking bands are not required on other chimney lengths, their use is recommended to provide a more attractive finished appearance high temp.

Stainless Steel Tees and Elbows

Insulated 15° and 30° Elbow Kits

- Includes 4 locking bands, 1 elbow support and 2 elbows.
- The insulated elbow is used when offset is required.
- Locking bands must be used on all elbows.
- Offsets cannot be more than 30° off the vertical.
- A maximum of 6 feet is allowable between offsets.
- Elbow is fully insulated and can be used at the same 2" clearance as chimney lengths.
- Elbow support must be used with all offset installations.
- Elbows do not have locking ridges and can be rotated to attain optimum positioning offset, and allow chimney to return to correct vertical alignment, prior to installing locking bands.

Insulated Tee with Plug

- The insulated chimney tee is used for through-the-wall installations using a wall support.
- A chimney length is attached to the tee branch using a locking band to pass safely through a wall.

If you require a 1/2 foot measure, use a 6" or 18" length to suit your needs.

Determining the Pitch of your Roof

To determine what roof flashing you'll require, you must work out the pitch of your roof. To determine the pitch, you'll need two rulers and a level. Measure the number of inches from the end of the level down to the roof.

Height Requirements

The chimney must extend at least three feet above the highest point where it passes through the roof surface and at least two feet higher than any part of the building within a horizontal distance of ten feet.

Chimney Offset Chart

This chart has three columns for elbow angle required to achieve your desired offset. The first column ("Offset") is the horizontal distance, at the chimney center line, of the offset needed to get around an obstacle. The second column ("Height") is the height of the assembled offset elbow to the top of the return elbow. Column 3 shows the appropriate lengths required.

- Determine the distance of the offset required.
- On the chart, find the predetermined distance required for the 15° elbow kit under the corresponding chimney diameter. For greater offset, use the 30° elbow kit.
- After finding the offset, follow across the chart to find the specified height and appropriate chimney lengths required under their corresponding diameters.

All measurements in inches. Construction tolerances ± one inch.

15° Offset Chart

Premium Rain Cap

- Advanced design, premium quality stainless steel.
- Provides protection against precipitation and creates a venturi effect to enhance draught.
- Twist-lock connection for secure installation.

Adjustable Flashing Assembly - Flat to 6/12

- Used where the chimney passes through a roof with a pitch of 1/12 to 6/12.
- Comes complete with storm collar.
- All seams are sealed with silicone sealant.
- Galvalume construction.

Size	Dimensions			Part #	Pack

Firestop Radiation Shield

- Required where the chimney passes from a lower living space into an upper living space.
- Maintains the mandatory two inch clearance to combustibles.
- Shields the joist space from heat radiation.
- Galvalume construction.

Size	Dimensions			Part #	Pack
	A	B	C		
5"	11"	9"	19"	JSC5FRS	1

Firestop Attic Insulation Shield

- The FAIS is installed where the chimney passes through a second story living space into the attic.
- Extends down through the ceiling into the living space.
- Maintains the mandatory two inch clearance to combustible.
- Galvalume construction.

Size	Dimensions			Part #	Pack
	A	B	C		
5"	13"	11"	26"	JSC5FAIS	1

8"	10-1/8"	16"	SPR8WTB	1

Attic Insulation Shield

- The AIS must be installed where the chimney enters the attic space in any installation.
- Designed to keep insulation away from the chimney, and to maintain the mandatory 2" clearance to combustibles.
- Must be used when installing through a second floor.

Size	Dimensions			Part #	Pack

Decorator Ceiling Support

- For use in ceiling support installations.
- Supports up to 50 feet of chimney.
- Matte black with brass finishing ring, support gives a premium finished appearance.
- Stove pipe adapter included.

Size	Dimensions			Part #	Pack
	A	B	C		
5"	7-1/4"	11-3/8"		SPR5CSB	1

8"	10-3/16"	14"	17"	SPR8CCSB	1

Roof Support

- The roof support may be used on a floor, ceiling or roof and adjusts to any roof pitch.
- It may be used above an offset to support the offset or as a supplementary support when the chimney height exceeds that of the primary support.
- The roof support will support a total height of 50 feet of chimney.

Size	Dimensions		Part #	Pack
	A	B

Adjustable Universal Roof Guy Kit

- Used when more than 5 feet of chimney extends from the roof.
- The kit includes two 5-foot rods and an adjustable band.
- Each rod extends to approximately 10 feet.
- The adjustable band will fit 6" to 8" size chimney.

Size	Dimensions		Part #	Pack
	A	B		
8 - 12"	60 - 120"		JURGK-1	1

Adapter Plate

- The adapter plate is used to adapt the chimney to zero clearance fireplaces.
